PROFESSIONAL SUMMARY

Product-minded technologist with 3 years of product design experience, complemented by hands-on quality assurance work and recently completed training in AI agent and automation development. Designs user-centered products from research through prototyping and usability testing, then applies the same rigor to quality assurance, building Cypress and Playwright test coverage integrated into CI/CD pipelines. Has since built and shipped multiple n8n-based AI automation systems, including multi-agent workflows using Model Context Protocol and a voice-enabled agent pulling live data. Leverages AI coding assistants including Claude Code, GitHub Copilot, ChatGPT/Codex, and DeepSeek to build, test, debug, and refine both automation workflows and design work, with a strong focus on prompt engineering to get the best output from each model. Comfortable moving between design, testing, and automation, with a consistent habit of stress-testing work before calling it done. Looking for a role to apply and continue building on this cross-disciplinary foundation.

CORE COMPETENCIES

- **Product Design** — User research, personas, wireframing, prototyping, usability testing, visual/brand design
- **Software Testing & QA** — Manual testing (functional, regression, smoke, exploratory, E2E), Cypress (BDD/Cucumber), Playwright fundamentals, CI/CD via GitHub Actions
- **AI Agent & Automation Development** — Multi-agent systems via Model Context Protocol, voice agents, live-data workflows in n8n (REST APIs, Google Sheets)
- **AI Tooling & Prompt Engineering** — Claude Code (VS Code & CLI), Claude for Design, GitHub Copilot, ChatGPT/Codex, DeepSeek (chat, reasoning, latest release); skilled at prompt design and prompt chaining to debug workflows, reduce iteration cycles, and consistently extract high-quality output across models
- **Dev & Documentation Tools** — JavaScript, Postman, Git/GitHub, Docker basics, technical documentation
- **Methodologies** — Agile (Scrum/Kanban), SDLC, STLC, test planning, requirement analysis

EXPERIENCE & TECHNICAL PROJECTS

Sales Multi-Agent System — AI Automation, Training Project (n8n)

January 2026

- Defined a target customer profile for a mid-market finance use case prior to development, ensuring the automation addressed a genuine sales workflow gap.
- Built two coordinated sub-agents (demo booking and deal logging) using MCP for clean context handoff between agents.
- Used Claude Code and Codex to scaffold, test, and finish the workflow end-to-end from writing and debugging automation logic to linking the project to GitHub for version control.

Voice-Enabled Product Assistant — AI Voice Agent, Training Project (n8n)

December 2025

- Deployed a browser-based voice agent answering spoken queries against a live Google Sheets product catalog.
- Validated the speech-to-workflow handoff across varied question types to confirm consistent performance.

Equity Portfolio Rebalancer — AI Automation Agent, Training Project (n8n)

December 2025

- Automated live ETF price retrieval and rebalancing calculations across a four-fund portfolio, replacing a manual spreadsheet process.

Cypress & Cucumber Automated Test Suite — Almond Careers Practical Training Project

March 2026

github.com/Bilex95/Spring002

- Authored Gherkin (BDD) feature files and step definitions covering Login, Signup, Profile, and Settings flows.
- Automated signup testing using Cypress custom commands and Faker.js-generated data across valid and invalid paths.
- Integrated the suite into GitHub Actions for automatic regression testing on every push and pull request.
- Used Claude Code (VS Code and CLI) to scaffold and debug test scripts and manage the GitHub integration powering the automated regression workflow.

AAC Quick-Phrase Assistant — Accessibility-Focused Workflow Automation, Personal Project (n8n)

2025

- Scoped and validated an end-to-end accessibility workflow for an AAC assistant serving children with assistive needs.
- Documented the system with a sample-log artifact, architecture diagram, and plain-language technical walkthrough.

Citylight — UI/UX Designer, Team Project Lead

February 2023 – March 2023

- Led a cross-functional team through research, design, and usability testing of a payment app for utility transactions and expense tracking.

Raidify Consultancy Nigeria Limited — UI/UX Designer

January 2023 – March 2023

- Designed an HR Management System that reduced repetitive admin steps, informed by stakeholder interviews and usability testing.

S&D Luxury Real Estate — Product Designer

February 2023

- Redesigned a property search webpage within brand guidelines, improving consistency and search experience.

EDUCATION

B.A. English Language, The Redeemer's University, Nigeria — 01/2015 – 01/2020

CERTIFICATIONS & TRAINING

- AI Builder: Create Agents, Voice Agents & Automations in n8n — Udemy (July 2026, 14.5 hrs)
- Certificate of Training Completion, Automation Software Testing — Almond Careers (March 2026)
- Product Design UI/UX Immersive — Techstudio Academy (01/2023 - 03/2023)
